

PERIOPERATIVE SERVICES

Post Operative Instructions

Your Hand Dressing

PAIN:

Normally, the surgery or injury is painful for the first 2 or 3 days.

OPERATIVE SITE:

The bandage on your hand and forearm is designed to hold the hand in a position that is optimal for your comfort and healing. Keep the hand elevated for the first 2 to 3 days. When standing, hold it at shoulder level. When lying down or sitting, rest it on one or two pillows. Do not allow it to become wet, as it may contain plaster, and must be protected. When showering, etc., insert the dressing into a large plastic bag and seal with an elastic band on the forearm.

FOLLOW-UP:

Should you have any problems or concerns about your condition, contact your Surgeon or the Surgeon on-call, through their office. If unable to reach either of them, come to the Emergency Department of the Queensway Carleton Hospital.

For your return appointment:

- Register at Admitting Department, Queensway Carleton Hospital on
Date: _____ at: _____
- Please telephone your Surgeon's office for a follow-up appointment.

ADDITIONAL INFORMATION:

- If the surgery or injury is painful for more than 2 or 3 days, notify your Surgeon.
- Numbness or tingling in the fingertips or a blue-grey discoloration of the fingers is indications that your dressing is becoming **too tight**.
 - Elevate the hand for one hour
 - If signs persist, call your Surgeon or go to the nearest
Emergency Department
- Do not attempt to revise or remove the bandage yourself.
